

# Function Related Problems

(Total 20 questions)

SL	Problem statement	Difficulty levels										
1.	Function to print a custom message.	*										
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td></td><td>This is a function</td></tr></table>		Sample input	Sample output		This is a function						
	Sample input		Sample output									
			This is a function									
2.	Function to print an input character value.	*										
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3</td><td>Value received from main: 3</td></tr><tr><td>A</td><td>Value received from main: A</td></tr></table>		Sample input	Sample output	3	Value received from main: 3	A	Value received from main: A				
	Sample input		Sample output									
	3		Value received from main: 3									
	A		Value received from main: A									
3.	Function to calculate the sum of <b>n</b> numbers coming from the console.	*										
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>80 33 27</td><td>Sum In Function: 140 Sum In Main: 140</td></tr><tr><td>100 -100</td><td>Sum In Function: 0 Sum In Main: 0</td></tr></table>		Sample input	Sample output	80 33 27	Sum In Function: 140 Sum In Main: 140	100 -100	Sum In Function: 0 Sum In Main: 0				
	Sample input		Sample output									
	80 33 27		Sum In Function: 140 Sum In Main: 140									
	100 -100		Sum In Function: 0 Sum In Main: 0									
4.	Function to calculate the sum of <b>n</b> numbers coming from the console and stored in an array.	*										
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>3</td><td>Sum In Function: 140</td></tr><tr><td>80 33 27</td><td>Sum In Main: 140</td></tr><tr><td>2</td><td>Sum In Function: 0</td></tr><tr><td>100 -100</td><td>Sum In Main: 0</td></tr></table>		Sample input	Sample output	3	Sum In Function: 140	80 33 27	Sum In Main: 140	2	Sum In Function: 0	100 -100	Sum In Main: 0
	Sample input		Sample output									
	3		Sum In Function: 140									
	80 33 27		Sum In Main: 140									
	2		Sum In Function: 0									
100 -100	Sum In Main: 0											
5.	Function to swap two numbers. (Restriction: Pass by value)	*										
	<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>10 20</td><td>Value in func: 20 10 Value in main: 10 20</td></tr></table>		Sample input	Sample output	10 20	Value in func: 20 10 Value in main: 10 20						
	Sample input		Sample output									
	10 20		Value in func: 20 10 Value in main: 10 20									

6.	<p>Function to swap two numbers. (<b>Restriction:</b> Pass by reference)</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>10    20</td><td>Value in func:  20   10 Value in main:  20   10</td></tr></table>	Sample input	Sample output	10    20	Value in func:  20   10 Value in main:  20   10	**		
Sample input	Sample output							
10    20	Value in func:  20   10 Value in main:  20   10							
7.	<p>Function to determine only even numbers in an array of input integers.</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>24   77   117   -512   1024</td><td>24   -512   1024</td></tr><tr><td>45   33   0    256</td><td>0    256</td></tr></table>	Sample input	Sample output	24   77   117   -512   1024	24   -512   1024	45   33   0    256	0    256	*
Sample input	Sample output							
24   77   117   -512   1024	24   -512   1024							
45   33   0    256	0    256							
8.	<p>Function that finds and returns the minimum value in an array.</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>157   -28   -37   26   10</td><td>Minimum Value: -37</td></tr><tr><td>12    45    1   10   5   3   22</td><td>Minimum Value:  1</td></tr></table>	Sample input	Sample output	157   -28   -37   26   10	Minimum Value: -37	12    45    1   10   5   3   22	Minimum Value:  1	**
Sample input	Sample output							
157   -28   -37   26   10	Minimum Value: -37							
12    45    1   10   5   3   22	Minimum Value:  1							
9.	<p>Function that multiplies the array elements by 2 and returns the array.</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>157   -28   -37   26   10</td><td>314   -56   -74   52   20</td></tr><tr><td>12    45    1   10   5   3   22</td><td>24    90    2   20   10   6   44</td></tr></table>	Sample input	Sample output	157   -28   -37   26   10	314   -56   -74   52   20	12    45    1   10   5   3   22	24    90    2   20   10   6   44	*
Sample input	Sample output							
157   -28   -37   26   10	314   -56   -74   52   20							
12    45    1   10   5   3   22	24    90    2   20   10   6   44							
10.	<p>Function to sort and return an input array in ascending order.</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>10    22   -5   117   0</td><td>-5   0   10   22   117</td></tr></table>	Sample input	Sample output	10    22   -5   117   0	-5   0   10   22   117	**		
Sample input	Sample output							
10    22   -5   117   0	-5   0   10   22   117							

11.	Function “ <b>IsPrime()</b> ” to determine whether a number is prime or not.	**												
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>1</td><td>Not prime</td></tr><tr><td>2</td><td>Prime</td></tr><tr><td>11</td><td>Prime</td></tr><tr><td>39</td><td>Not prime</td></tr><tr><td>101</td><td>Prime</td></tr></table>		Sample input	Sample output	1	Not prime	2	Prime	11	Prime	39	Not prime	101	Prime	
Sample input	Sample output													
1	Not prime													
2	Prime													
11	Prime													
39	Not prime													
101	Prime													
12.	Function “ <b>GeneratePrime()</b> ” to compute the prime numbers less than <b>N</b> , where <b>N</b> is an input integer. <b>GeneratePrime()</b> uses <b>IsPrime()</b> to check whether a number is prime or not.	***												
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5</td><td>Prime less than 5: 2, 3</td></tr><tr><td>10</td><td>Prime less than 10: 2, 3, 5, 7</td></tr><tr><td>40</td><td>Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37</td></tr></table>		Sample input	Sample output	5	Prime less than 5: 2, 3	10	Prime less than 10: 2, 3, 5, 7	40	Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37					
Sample input	Sample output													
5	Prime less than 5: 2, 3													
10	Prime less than 10: 2, 3, 5, 7													
40	Prime less than 17: 2, 3, 5, 7, 11, 13, 17, 19, 23, 29, 31, 37													
13.	Function “ <b>GenNthPrime()</b> ” to compute the <b>N<sup>th</sup></b> prime number, where <b>N</b> is an integer input.	***												
<table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5</td><td>5th Prime: 11</td></tr><tr><td>10</td><td>10th Prime: 29</td></tr><tr><td>40</td><td>40th Prime: 173</td></tr></table>		Sample input	Sample output	5	5th Prime: 11	10	10th Prime: 29	40	40th Prime: 173					
Sample input	Sample output													
5	5th Prime: 11													
10	10th Prime: 29													
40	40th Prime: 173													
14.	Implement the following functions and calculate standard deviation of an array whose values come from the terminal-  TakeInput() CalcMean(array, num_of_elem) Calc_Std_deviation(array, num_of_elem)  <div>Formula: <math>\sigma = \sqrt{\frac{\sum (x-M)^2}{N}}</math></div> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>4 5 5 4 4 2 2 6</td><td>1.32</td></tr><tr><td>600 470 170 430 300</td><td>147.32</td></tr></table>	Sample input	Sample output	4 5 5 4 4 2 2 6	1.32	600 470 170 430 300	147.32	***						
Sample input	Sample output													
4 5 5 4 4 2 2 6	1.32													
600 470 170 430 300	147.32													

15.	<p>Function <b>find_substr( )</b> that takes two string arrays (<b>a, b</b>) as parameters, returns 1 if string <b>b</b> is found anywhere in string <b>a</b>, or returns –1 if no match is found.</p> <p>(Assuming, strlen(a)&gt;strlen(b))</p> <table><tr><th>Sample input (a, b)</th><th>Sample output</th></tr><tr><td>madam    adam</td><td>1</td></tr><tr><td>telescope    less</td><td>0</td></tr><tr><td>101010    101</td><td>1</td></tr></table>	Sample input (a, b)	Sample output	madam    adam	1	telescope    less	0	101010    101	1	**
Sample input (a, b)	Sample output									
madam    adam	1									
telescope    less	0									
101010    101	1									
16.	<p>Function <b>find_substr( )</b> that takes two string arrays (<b>a, b</b>) as parameters, uses function <b>str_length()</b> to determine the lengths of the strings, and then looks for the smaller string anywhere in the bigger string. It returns 1 if the substring is found, or returns –1 if no match is found.</p> <p>[Restriction: str_length() cannot uses built-in strlen() function]</p> <table><tr><th>Sample input (a, b)</th><th>Sample output</th></tr><tr><td>madam    adam</td><td>1</td></tr><tr><td>telescope    less</td><td>0</td></tr><tr><td>101010    101</td><td>1</td></tr></table>	Sample input (a, b)	Sample output	madam    adam	1	telescope    less	0	101010    101	1	***
Sample input (a, b)	Sample output									
madam    adam	1									
telescope    less	0									
101010    101	1									
17.	<p>Program that continuously takes two positive integers as inputs and uses two functions to find their GCD (greatest common divisor) and LCM (least common multiple). Both functions take parameters and returns desired values.</p> <p>[Hint: Use infinite loop to process inputs]</p> <table><tr><th>Sample input</th><th>Sample output</th></tr><tr><td>5   7</td><td>GCD: 1 LCM: 35</td></tr><tr><td>12 12</td><td>GCD: 12 LCM: 12</td></tr><tr><td>12 32</td><td>GCD: 4 LCM: 96</td></tr></table>	Sample input	Sample output	5   7	GCD: 1 LCM: 35	12 12	GCD: 12 LCM: 12	12 32	GCD: 4 LCM: 96	**
Sample input	Sample output									
5   7	GCD: 1 LCM: 35									
12 12	GCD: 12 LCM: 12									
12 32	GCD: 4 LCM: 96									

18.

Program that implements function to perform operations on a 3X5 matrix:

\*\*\*

*InputMatrix()*  
*ShowMatrix()*  
*ScalarMultiply()*

Sample input	Sample output
7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  2	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  Multiplied by 2: 14 32 110 26 24 24 20 104 0 14 -4 2 4 8 18
7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  -1	Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  Multiplied by -1: -14 -32 -110 -26 -24 -24 -20 -104 0 -14 4 -2 -4 -8 -18

19.

Program that implements function to perform operations on a **MXN** matrix:

\*\*\*\*

*InputMatrix()*  
*ShowMatrix()*  
*ScalarMultiply()*

Sample input	Sample output
2 2  7 16 12 10  2	Original: 7 16 12 10  Multiplied by 2: 14 32 24 20

	<div><div>3 5  7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  -1</div><div>Original: 7 16 55 13 12 12 10 52 0 7 -2 1 2 4 9  Multiplied by -1: -14 -32 -110 -26 -24 -24 -20 -104 0 -14 4 -2 -4 -8 -18</div></div>									
20.	<p>Program to convert a positive integer to another base using the following functions-</p> <div><div>I. Get_Number_And_Base () : Takes number to be converted (N) and base value (B) from user. Base must be between 2 and 16.</div><div>II. Convert_Number () : Does the conversion</div><div>III. Show_Converted_Number() : Displays the converted value.</div></div> <table><tr><th>Sample input(N,B)</th><th>Sample output</th></tr><tr><td>100 8</td><td>144</td></tr><tr><td>512 16</td><td>200</td></tr><tr><td>512 0</td><td>Base not within proper range!</td></tr></table>	Sample input(N,B)	Sample output	100 8	144	512 16	200	512 0	Base not within proper range!	****
Sample input(N,B)	Sample output									
100 8	144									
512 16	200									
512 0	Base not within proper range!
